🧩 Jigsaw Solver: Macro Precision Mat

Optimized for Standard 1,000-Piece Puzzles (Ravensburger, Clementoni, Buffalo Games)

📐 Why This Solves the Webcam Resolution Problem:

- **Piece Geometry:** In a standard 1,000-piece Ravensburger (42 × 24 grid on 70×50cm), an average piece is only `16.7mm × 20.8mm` (~0.7" × 0.8").
- **Macro Framing:** By shrinking the 4 anchors to a tight 3.5" box, you can bring your webcam just **6 to 8 inches** away.
- **Resolution Gain:** The piece now fills **~250 × 300 pixels** (instead of 60px), giving the Rust engine sub-millimeter tab & blank precision!

Print on US Letter at 100% Scale (Do not scale/shrink to fit). You can optionally cut out the 4.2" square card.
